

Knowledge Know-How – Tech Stack Overview

Name: Favas M

Role: Full-Stack Developer / Cyber Security / AI / Block Chain

1. Development Environment & Coding Tools

- **VS Code** – Primary code editor with extensions (Prettier, ESLint, GitLens)
 - **Git & GitHub** – Version control and collaboration
 - **Node.js & npm** – Backend runtime and package management
 - **Postman** – API testing and debugging
 - **Chrome DevTools** – Frontend debugging and performance testing
 - **Terminal / CLI** – Command-line operations
-

2. Web Frameworks

Frontend:

- **React.js** – Component-based UI development
- **Next.js** – Full-stack React framework (SSR & routing)
- **Tailwind CSS** – Utility-first modern styling

Backend:

- **Node.js (Express.js)** – REST API development
 - **Firebase (basic)** – Backend services (auth, hosting)
-

3. AI/ML Frameworks

- **TensorFlow (basic understanding)** – ML model concepts
- **Scikit-learn (basic)** – Data analysis and simple ML models
- **OpenAI APIs (practical use)** – AI integration in apps

4. Agentic AI Tools

- **LangChain (basic)** – Building AI workflows
 - **AutoGPT / Agent frameworks (conceptual knowledge)**
 - **Custom prompt workflows** for automation and task execution
-

5. LLM Platforms

- **OpenAI (ChatGPT, GPT APIs)** – Core LLM usage
 - **Google AI Studio (Gemini)** – Prompt-based app building
 - **Claude (Anthropic)** – Code generation & structured outputs
-

6. AI Tools You Frequently Use

- ChatGPT – Coding, debugging, learning
 - Claude – Structured code generation
 - GitHub Copilot – Inline coding assistance
 - Google AI Studio – App prototyping
 - Notion AI – Documentation & planning
-

7. Cloud Platforms

- **Vercel** – Frontend deployment (Next.js, React apps)
 - **Netlify** – Static site hosting
 - **Firebase Hosting** – Web app deployment
 - **Render (basic)** – Backend deployment
-

8. Databases

- **MongoDB** – NoSQL database (primary)
 - **Firebase Firestore** – Real-time database
 - **MySQL (basic)** – Relational database fundamentals
-

Additional Skills

- REST API design
 - Authentication (JWT, Firebase Auth)
 - Responsive UI/UX design
 - Git workflow (branching, commits, PRs)
-

Conclusion

I actively work with modern web technologies and AI tools to build scalable, user-friendly applications. My focus is on improving full-stack development skills while integrating AI capabilities into real-world projects.
